

Abstract:

Tabriz Bazaar that is known as the eldest structure that is known by the whole world. that is registered universal, these days from one side conflict for problems that cause from oldest design that used and the other side urbanism of city and other things that have effect on the ways of people living method. These problems are also get annoys at normal duration, and while the earthquake in the special time, cause so bad effect.

Mirabolhasan Complex that is known by the key of the Tabriz Bazaar and known the center of export dried fruit not so much old days, also is involved are mentioned, those problems also getting to lose the buyers step by step are going to lose the seller on bazaar, they need the real important attention, most important of all is get the reducing the seismic vulnerability.

In this research we are trying to use observation to know about system calculating the effect of cause on the structure by using the computer software, and the result of those practices human usage of problems and the part of the place that is most usage of bazaar in normal situation, and reducing the seismic vulnerability result.

we should mention about in this research is just on simple things that done as a start things we have to done on Tabriz Bazaar situation, last word about the seismic vulnerability we should expand our experience and development to get more result on the Tabriz Bazaar effect.
