

Title of thesis:

Restoration and rehabilitation plan of the extant historic urban the range between the two shrines, Shahcheragh and Asante, and destruction area in Shiraz.

Abstract:

The historic urban of cities are reckoned a part of national identity a country by having anatomical, functional , economic and cultural worth. these areas go toward recession because of wear's residential units, non-ease access, weakness of foundations, biological ,s environment problems, living problems of people and separateness of civic and specialists managements. For solving problems in economic, social, cultural and anatomical fields, planning in forms of restoration and revival (rebuilding, new-built, best- building) have been provided and performed in different countries. The way of facing these turbans was been differed because of philosophes view in building cities.

At the past times, Shiraz's historic urban had many outputs because of economic and ministration centers. But in recent years, gradually these unbans missed their splendor by offices separateness and wear advance. In 10 years ago, this unbans are returning towards functional and structural revival and restoration. The old urban of Shiraz with 360 hectares area is in the center of present city. The area which consists 2.8 percent of all city, is the primary stone of formation of Shiraz city, and in different periods has suffered many changes that its extent is gates around the city in Zandie period. The most important religious center of the city and main part of worthy cultural, economic, historic buildings are located in this area.

The existence of 400 worthy arts, 8 gates, 12 Mahale centers and 4 traditional Bazzars and historic mosques and shrines of imams that are reckoning the most important of religious centers of all cities and several cultural axes can be expressive hidden worth, the lifestyle and social relationships, customs, belief, history and art. On the whole, compression of this worth's is expressive historic and cultural identity of this area's formation periods. Protection, restoration and arrangement of this collection, furthermore, revive these traces again; revive historic and cultural identity of Shiraz city from an economic and social.

The goal of this search is assessment of damages of parts of Shiraz's historic and cultural unbans (between Shahcheragh and Astaneh harams), assessment of force and weakness points and finally presenting best solutions for arrangement of this worthy historic urban.

This search answer to these questions: if this historic urban has ability of arrangement? What worthy parts are protecting in this urban? Which part of urban needs to restoration and which part of urban needs to revive? The results of this search are collection of solutions according to civic advance programs and civic detailed plan's goals for worth, protection and more demolition's prevention of these areas.
